

InMed Pharmaceuticals Inc.

**AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS**

Three Months Ended

September 30, 2019

Amendment and Restatement

Subsequent to filing its Unaudited Condensed Consolidated Interim Financial Statements and management's discussion and analysis for the three months ended September 30, 2019, an error was identified in such financial statements and in the management's discussion and analysis. The Company determined it was appropriate to amend and restate its Unaudited Condensed Consolidated Interim Financial Statements and management's discussion and analysis for the three months ended September 30, 2019 to correct the noted error and related note disclosure in the originally filed documents.

This amended and restated management's discussion and analysis of the Company for the three months ended September 30, 2019, amends and restates the management's discussion and analysis of the Company for the three months ended September 30, 2019 dated and filed on SEDAR on November 8, 2019.

The key changes in this amended and restated management's discussion and analysis for the three months ended September 30, 2019 are: (i) to reverse share-based payment transactions due to the forfeiture of granted stock options that had not fully vested thus reducing the net and comprehensive loss for the period and the contributed surplus and the accumulated deficit; and (ii) the addition of supplementary disclosure with respect to the impact of the reduction in share-based payments on various financial statement accounts.

As a result of the changes in the net and comprehensive loss for the period and the contributed surplus and accumulated deficit, there have been changes to the balances originally reported in the Condensed Interim Consolidated Statements of Financial Position, Condensed Consolidated Interim Statements of Comprehensive Loss, Condensed Consolidated Interim Statements of Changes in Equity and Condensed Consolidated Interim Statements of Cash Flows to the Unaudited Condensed Consolidated Interim Financial Statements for the three months ended September 30, 2019.

February 12, 2020

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

The following Amended and Restated Management's Discussion and Analysis ("MD&A") is intended to assist the reader to assess material changes in the financial condition and results of operations of InMed Pharmaceuticals Inc. ("InMed" or the "Company") as at September 30, 2019 and for the three months then ended in comparison to the three months ended September 30, 2018. This MD&A should be read in conjunction with the amended and restated unaudited condensed consolidated financial statements for the three months ended September 30, 2019 and September 30, 2018 and related notes.

All financial results presented in this MD&A are expressed in Canadian dollars unless otherwise indicated. The effective date of this MD&A is November 6, 2019.

Throughout the report we refer to InMed as the "Company", "we", "us", "our" or "its". All these terms are used in respect of InMed Pharmaceuticals Inc. Additional information on the Company can be found on the Company's website www.inmedpharma.com and SEDAR at <http://www.sedar.com>.

Cautionary Statement on Forward-Looking Information

This discussion may contain forward-looking statements within the meaning of the Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934, and forward looking information within the meaning of Canadian securities laws (collectively, "forward-looking statements"). When used in this MD&A, the words "*plan*," "*expect*," "*believe*," "*intend*," and similar expressions generally identify forward-looking statements. These statements reflect the Company's current expectations and estimates about the markets in which the Company operates and management's beliefs and assumptions regarding these markets. Investors are cautioned that all forward-looking statements involve risks and uncertainties. Forward-looking statements in this report include, without limitation, the potential impact of INM-755 on the symptoms and underlying disease of Epidermolysis Bullosa; the belief that a single-agent formulation for INM-755, rather than a combination product, will ultimately improve the probability of development and regulatory success in Epidermolysis Bullosa; conducting key preclinical pharmacology and toxicology (safety) studies; the expectation of initiating subject screening and enrollment in the clinical trial for INM-755 by the end of calendar year 2019; the expectation that we will have a clear indication as to the commercial yield and cost structure of our current biosynthesis process by the end of calendar 2019; the Company's ability to successfully optimize, scale-up and combine the components of its biosynthesis manufacturing process for cannabinoids; the Company's biosynthesis platform technology benefiting its drug candidate pipeline, along with other pharmaceutical companies and having further commercial potential from non-pharmaceutical companies and its potential to open up significant revenue opportunities ahead of our clinical development candidates; filing additional patent applications and publishing our scientific data in 2019; advancing from a preclinical stage company to a clinical stage company in the fourth quarter of calendar 2019; expecting that INM-088 will be in advanced preclinical studies and formulation development prior to the end of the calendar year 2019; the availability of key personnel; the belief that the Company has cash resources to last until approximately into the fourth quarter of calendar 2020; and securing the ongoing necessary funding required to develop drug therapies, scale-up of the biosynthesis process, and prosecute patent applications.

The material factors and assumptions used to develop the forward-looking statements contained in this MD&A are based on numerous assumptions regarding, among other things: the continued results of the Company's research and development; favourable regulatory reviews; establishing demand for the Company's products; the ability to find suitable financing and strategic partners; the continued availability of key personnel; and management's ability to maintain the Company as a going concern to further develop prescription drug therapies through research and development into the pharmacology of cannabinoids. While we consider these assumptions to be reasonable, these assumptions are inherently subject to significant business, economic, competitive, market and social uncertainties and contingencies.

Our actual results could differ materially from those discussed in the forward-looking statements as a result of a number of important factors. In light of the many risks and uncertainties as described in this report, readers should understand that InMed cannot offer assurances that the forward-looking

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

statements contained in this analysis will be realized. Additional information on these and other potential risk factors that could affect the Company's financial results are included in this MD&A, including under the heading "Risks and Uncertainties", and in documents filed from time to time with the provincial securities commissions in Canada, including in our Annual Information Form under the heading "Risk Factors", copies of which are available on SEDAR at <http://www.sedar.com>.

All forward-looking statements herein are qualified in their entirety by this cautionary statement, and we explicitly disclaim any obligation to revise or update any such forward-looking statements or to publicly announce the result of any revisions to any of the forward-looking statements contained herein to reflect future results, events or developments, except as required by law.

Overall Performance and Operations

The Company was incorporated in the Province of British Columbia on May 19, 1981, under the *Business Corporations Act* of British Columbia under the name Kadrey Energy Corporation. The Company has undergone a number of corporate name changes since its incorporation. In May 2014, the Company, then named Cannabis Technologies Inc. and since October 6, 2014 named InMed, began to specialize in cannabinoid pharmaceutical product development.

The Company's shares are listed on the Toronto Stock Exchange ("TSX" or "Exchange") under the trading symbol "IN", and under the trading symbol "IMLFF" on the OTCQX® Best Market.

InMed's corporate office and principal place of business is located at suite 310 – 815 West Hastings Street, Vancouver, B.C. V6C 1B4.

Research and Development

InMed is a preclinical stage biopharmaceutical company that specializes in developing novel therapies through the research and development into the extensive pharmacology of cannabinoids coupled with innovative drug delivery systems. InMed's cannabinoid biosynthesis technology and drug development pipeline are the fundamental value drivers of the Company. InMed continues to work on the development of several new cannabinoid-based treatments for multiple diseases including dermatology, ocular, pain, inflammation, and cancer disease areas, among others.

Highlights during the quarter ended September 30, 2019, and as the date hereof include:

INM-755

Our lead product, INM-755, is being developed as a treatment for the rare disease Epidermolysis Bullosa ("EB"), a serious and severe genetic skin disorder. EB results in very fragile skin which can blister easily. One form of EB, EB Simplex, is a result of a defect in anchoring between the epidermis and the dermis, resulting in severe skin fragility that can range from mild to fatal. There is no cure or approved treatments for EB. Wound care, inflammation, pain and itch management, antimicrobial interventions and preventative bandaging are currently the only treatment options available.

INM-755 is a proprietary, topical cannabinoid product candidate targeted as a therapy in EB and other potential dermatological applications. It has been specifically designed with the intent to: (i) possibly improve skin integrity in a subset of EB Simplex patients through keratin up-regulation, and (ii) to treat major symptoms of the disease in all patients with EB. Preclinical data demonstrates that INM-755 may have an impact on certain EB symptoms. These disease hallmarks are key therapeutic targets for an effective treatment in EB patients as well as other dermatological conditions. Additionally, our data indicates that INM-755 may potentially have an impact on the underlying disease severity by increasing certain keratin production in the skin.

During the quarter ending September 30, 2019, we continued to work with external contractors in Europe, Israel, Canada and other jurisdictions to carry out work on pharmacology and toxicology studies that are

required prior to INM-755 being used in human clinical studies. We also continued preparations with the clinical contract research organization for the Phase I healthy volunteer human clinical studies. Currently, we are planning to conduct these initial Phase I studies in the Netherlands. Subsequent to the quarter ended September 30, 2019, and as announced November 5, 2019, we filed our regulatory application to initiate clinical trials for INM-755 and we expect to initiate subject screening and enrollment by the end of calendar year 2019. Looking forward, we will also seek guidance from the U.S. FDA to support subsequent global clinical studies in EB patients.

Biosynthesis

Manufacturing of pharmaceutical grade cannabinoids remains a challenge, especially for those cannabinoids that are found in only trace amounts in the cannabis plant but, nevertheless, may hold very important physiological benefits in humans. We recognized that having a reliable source of pure, pharmaceutical-grade starting materials for our products would be a critical success factor for our drug development strategy. For the past several years, we have been developing a biosynthesis process for the manufacturing of cannabinoids through a research collaboration with the University of British Columbia ("UBC"). We continue to work with the UBC to develop this biosynthesis process for potential manufacturing of any of the 100+ naturally-occurring cannabinoids. We believe this process is unique in that the end product is targeted to be bio-identical to plant-sourced cannabinoids, and benefits from the convenience, control and quality of a laboratory-based manufacturing process without the risk and high-resource requirements of agriculture growing operations.

In conjunction with our collaborators at UBC, we continue to advance the production platform for the bio-fermentation of cannabinoids. Optimization of the gene vector at UBC will continue in parallel with the identification of optimal fermentation conditions and downstream purification processes.

During the quarter ending September 30, 2019, we continued to work with the National Research Council of Canada, or NRC, located in Montreal, Canada, to optimize conditions for biofermentation process scale-up needed to maximize the commercial potential of our proprietary *E. coli* based cannabinoid biosynthesis system. This work involved further optimization of several fermentation parameters that are part of the "Up Stream Process" (or "USP") in order to maximize production yield. In parallel, we also worked on "Down Stream Purification" ("DSP") with multiple contract development manufacturing organizations ("CDMOs"). We worked with multiple external pharmaceutical CDMOs to concurrently conduct process development for both the USP and DSP. By the end of calendar 2019, we expect to have a clear indication as to the commercial yield and cost structure of our current biosynthesis process. Through ongoing R&D efforts, we are also exploring an alternative biosynthetic manufacturing process in addition to our existing approach utilizing the *E. coli* biosynthesis process.

Our proprietary biosynthesis platform technology will potentially benefit our drug candidate pipeline, as well as other pharmaceutical companies seeking pharmaceutical-grade cannabinoids for their specific R&D purposes. Further commercial potential arises from non-pharmaceutical companies looking to source high-quality cannabinoids for their products, such as over-the-counter medications (*i.e.*, non-prescription) and, potentially, recreational-oriented products. This biosynthesis technology has the potential to open up significant revenue opportunities ahead of our clinical development candidates.

Other R&D Highlights

During the quarter ending September 30, 2019, we continued further preclinical work on INM-088, our drug candidate for the ocular program. We anticipate being in advanced preclinical studies and formulation development prior to the end of the calendar year. For INM-088 and other new potential drug/disease targets continue to advance in accordance with our plans, we are exploring ways to expedite the advancement of these key assets. As patents are filed for these product candidates, we expect to begin to publish our data and further validate the importance of our technologies.

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

Corporate

On August 2, 2019, we announced the appointment of Bruce S. Colwill, CPA, CA as Chief Financial Officer, effective August 9, 2019. Mr. Colwill joins InMed with over 25 years of experience in financial leadership roles. Prior to InMed, Mr. Colwill served as Chief Financial Officer of General Fusion Inc., a private clean energy company, since October 2016. Previously, Mr. Colwill was Chief Financial Officer at Entrée Resources Inc. (TSX:ETG; NYSE American:EGL) a mineral exploration company, from February 2011 to March 2016. He has also held Chief Financial Officer roles at Neuromed Pharmaceuticals Ltd., Response Biomedical Corp, Forbes Medi-Tech Inc. and Euronet Services Inc. Contemporaneous with Mr. Colwill's appointment, InMed consolidated the roles of Chief Financial Officer and Chief Business Officer into one position, that of Chief Financial Officer. Jeff Charpentier stepped down from the CFO role but is continuing as part of the InMed team in a role with a reduced time commitment. In addition, CBO Josh Blacher left InMed in August 2019 to pursue another opportunity in the investment management industry.

On July 2, 2019, we announced the appointment of Catherine Sazdanoff, JD, to our Board of Directors. Ms. Sazdanoff is a 35-year veteran of the global pharmaceutical industry and currently serves as President and CEO of Sazdanoff Consulting LLC, founded in 2014, where she works with healthcare companies on strategy and corporate/business development. Prior to Sazdanoff Consulting, Ms. Sazdanoff held various global VP roles in corporate/business development and finance at Takeda Pharmaceuticals, where she joined in 2006. Prior to Takeda, Ms. Sazdanoff served in senior management positions at Abbott Laboratories since 1984, including litigation, commercial and transactional legal roles, marketing, compliance, and business development. At both Takeda and Abbott, she completed numerous transformational deals, including Abbott's acquisition of Knoll (with Humira®), and Takeda's acquisitions of Millennium and Nycomed. Ms. Sazdanoff is a Board member of Meridian Bioscience. She earned a BA degree from the University of Notre Dame and a JD degree from Northwestern University School of Law. Ms. Sazdanoff makes valuable contributions to the Board based on her over 30 years of experience in various legal, compliance, commercial and business development roles with leading pharmaceutical companies.

On September 3, 2019, we announced that Martin Bott had resigned as a Director of the Company, effective August 31st, 2019, due to additional professional and personal responsibilities.

Outlook

The Company continues to focus its efforts on research and development in the biotech sector, with its primary attention to further advance its current drug therapies from the current preclinical stage into clinical studies, scale-up of the biosynthesis process, as well as the successful completion of its patent applications. Additionally, the Company will continue its efforts to secure the ongoing necessary funding required to develop its drug therapies and its biosynthesis process for the manufacturing of cannabinoids and related patent applications.

Results of Operations

Financial Results for the three months ended September 30, 2019 and September 30, 2018:

During the three month period ended September 30, 2019, the Company reported a comprehensive loss of \$3,386,815 and loss per share of \$0.02 compared to a comprehensive loss of \$2,841,224 and loss per share of \$0.02 reported in the comparative period ended September 30, 2018. The largest components of the loss for the current period were attributed to research and development expenses of \$2,331,788 (September 30, 2018 - \$627,094), general and administration expenses of \$958,331 (September 30, 2018 - \$813,036), and non-cash, share-based payments in connection with the grant of stock options of \$151,567 (September 30, 2018 - \$1,423,790).

The increase in comprehensive loss for the quarter ended September 30, 2019 from the comparative period was primarily the result of an increase in research and development costs.

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

The summary of changes in research and development expenditures for the quarters ending September 30th were as follows:

	2019	2018	Change	
	\$	\$	\$	%
Research & Development Expenses				
R&D personnel compensation	442,292	239,964	202,328	84%
External contractors	1,590,151	275,732	1,314,419	477%
Patents	64,258	71,231	(6,973)	-10%
Research supplies	267,507	37,671	229,836	610%
Other	5,259	2,496	2,763	111%
Subtotal	2,369,467	627,094	1,742,373	278%
Less research grant revenue	(37,679)	-	(37,679)	n/a
Net Research & Development	2,331,788	627,094	1,704,694	272%

Significant increases/decreases in expenditures to note for research and development expenditures include:

R&D personnel compensation – The increase in expenditures was primarily the result of increase in the number of R&D personnel combined with overall higher compensation levels.

External contractors – The Company carries out R&D activities through the use of external contractors, acting under the direction of internal R&D personnel. The costs associated with external R&D contractors increased in the quarter ending September 30, 2019 primarily as a result of work associated with the INM-755 preclinical studies required for the regulatory application to initiate clinical trials for INM-755 combined with increased spending on the Company's biosynthesis program.

Research supplies – The increase in research supplies is primarily a result of the purchase of active pharmaceutical ingredients to be used in the clinical trial for INM-755.

Research grant revenue – The increase in research grant revenue that offsets R&D expenditures is a result of a grant received from National Research Council Canada Industrial Research Assistance Program ("NRC IRAP") to support our ongoing cannabinoid biosynthesis R&D program.

The summary of changes in general and administrative expenditures for the quarters ending September 30th were as follows:

	2019	2018	Change	
	\$	\$	\$	%
General & Administration Expenses				
Accounting and legal	254,179	120,393	133,786	111%
Consulting	1,250	13,035	(11,785)	-90%
Investor relations, website development and marketing	101,639	155,443	(53,804)	-35%
Office and administration fees	83,865	40,284	43,581	108%
Regulatory fees	20,880	39,144	(18,264)	-47%
Rent	37,118	49,626	(12,508)	-25%
Shareholder communications	28,202	7,117	21,085	296%
Transfer agent fees	2,708	4,173	(1,465)	-35%
Travel and conferences	22,657	19,217	3,440	18%
Salaries and employee benefits	405,833	364,604	41,229	11%
Total General & Administration	958,331	813,036	145,295	18%

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

Significant increases/decreases in expenditures to note for general and administration include:

Accounting and Legal – There was an increase in both legal and accounting costs as compared to the prior year was largely the result of expenses from external service providers related to various corporate initiatives.

Investor relations, website development & marketing – The decrease in expenditures was the result of reduced use of external parties to support the Company's investor relations activities. The Company activities include approximately \$17,000 of conference and road show attendance, \$25,000 of press release related expenses and \$55,000 of external investor relations consulting costs.

Office and administration fees – The increase in office and administration was primarily the result of higher costs for both a new employer health tax and one-time costs associated with the Company's relocation to new offices.

Salaries and employee benefits – The increase is due to increased time commitment of certain part time employees and higher salary levels for certain personnel.

Summary of Quarterly Results

The following table summarizes certain selected financial information reported by the Company for the each of the last eight quarters reported. The following quarterly results are prepared in accordance with IFRS.

Three months ended:	Q1-20 Sept. 30 2019 \$	Q4-19 June 30 2019 \$	Q3-19 Mar. 31 2019 \$	Q2-19 Dec. 31 2018 \$	Q1-19 Sept. 30 2018 \$	Q4-18 June 30 2018 \$	Q3-18 Mar. 31 2018 \$	Q2-18 Dec. 31 2017 \$
Revenue	—	—	—	—	—	—	—	—
Net and Comprehensive Loss	(3,386,815)	(4,269,676)	(3,490,571)	(2,653,571)	(2,841,224)	(3,029,200)	(2,127,957)	(1,543,609)
Loss per share – basic and diluted	(0.02)	(0.02)	(0.02)	(0.02)	(0.02)	(0.02)	(0.01)	(0.01)

Liquidity and Capital Resources

As at September 30, 2019, the Company had working capital of \$13,593,209 (June 30, 2019 – \$16,985,451), which consisted of: cash \$14,708,963 (June 30, 2019 - \$12,873,961), short-term investments \$57,925 (June 30, 2019 – \$5,165,093), accounts receivable of \$40,088 (June 30, 2019 - \$84,987) and prepaids and advances of \$248,306 (June 30, 2019 – \$424,275) offset by accounts payable and accrued liabilities of \$1,367,868 (June 30, 2019 - \$1,562,865) and current portion of lease obligations \$94,205 (June 30, 2019 - \$Nil).

As at September 30, 2019, shareholders' equity was \$14,990,752 which was a decrease of \$3,235,248 as compared to June 30, 2019. The decrease in shareholders' equity primarily arose from the loss for the quarter ended September 30, 2019 of \$3,386,815 net of the non-cash, share-based payment expense for the same period of \$151,567.

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

Financial position:	September 30 2019	June 30 2019
Cash and cash equivalents and short-term investments	\$14,766,888	\$18,039,054
Working capital	\$13,593,209	\$16,985,451
Property, plant and equipment	\$647,391	\$55,829
Intangible assets	\$1,159,871	\$1,184,720
Total Assets	\$16,862,544	\$19,788,865
Shareholders' equity	\$14,990,752	\$18,226,000

As at September 30, 2019, the Company had no material ongoing contractual or other commitments other than in the normal course of business. The following table summarizes the Company's contractual obligations as at September 30, 2019 related to its Vancouver office premises and agreements with various contract research organizations:

	Payments Due by Period			
	Total	Less than 1 year	1-3 years	After 3 years
Operating Leases ¹	\$960,003	\$190,996	\$404,579	\$364,428
Purchase Obligations	\$3,228,272	\$3,076,245	\$152,027	\$Nil
Total Contractual Obligations	\$4,188,275	\$3,267,241	\$556,606	\$364,428

¹ Includes estimated operating costs of \$78,500 on an annual basis through to August 31, 2024.

The development of pharmaceutical products is a process that requires significant investment. As such, InMed expects to continue to incur losses for the foreseeable future. The Company anticipates a continued increase in research and development costs including for clinical trials of its drug candidates, general and administrative costs related to additions of personnel, and/or infrastructure that may be required.

Based on the funds available as at September 30, 2019, the Company estimates that it has cash resources to last until approximately into the fourth quarter of calendar 2020 which will fund a continuing significant increase in R&D spend to continue development of its drug product candidates, including the preclinical and early clinical program for INM-755, the formulation and preclinical development for INM-088, and further scale-up of the biosynthesis program, among other R&D activities.

The Company's continuing operations will be dependent upon obtaining necessary financing in order to further develop its current business plan. The Company expects that it will continue to fund its operations primarily through the issuance of equity or debt securities. The Company's ability to continue its operations on a going concern basis is dependent upon its ability to raise these additional funds. The certainty and outcome of these matters cannot be predicted at this time. See "Risks and Uncertainties" below.

Off-Balance Sheet Arrangements

As at September 30, 2019, the Company had no off-balance sheet arrangements.

InMed Pharmaceuticals Inc.

	\$ 648,180	\$ 1,743,259

New Standards Applicable in the Reporting Period

On January 13, 2016, the IASB published a new standard, IFRS 16 Leases. The new standard brings most leases on-balance sheet for lessees under a single model, eliminating the distinction between operating and finance. Lessor accounting remains largely unchanged and the distinction between operating and finance leases is retained. The mandatory effective date of the new standard is applicable for annual periods beginning on or after January 1, 2019. The Company has adopted IFRS 16 Leases as of July 1, 2019 using the modified retrospective approach. Under this approach, there is no restatement of prior period financial information and any accumulated deficit at the date of initial application. As of July 1, 2019, the Company recognized right-of-use assets of \$568,840 and lease obligations of \$503,924 in an operating lease arrangement for which the Company is considered the lessee with lease terms of more than 12 months. There was no impact to opening accumulated deficit. Furthermore, the impact of the adoption of the new standard is non-cash in nature; as such, there is no material impact on cash flows. Please refer to "Changes in significant accounting policies" below and Note 13 in the Company's financial statements for more information.

Changes in significant accounting policies

Except as described below, the accounting policies applied in these unaudited condensed consolidated interim financial statements are the same as those applied in the Company's consolidated financial statements as at and for the year ended June 30, 2019.

The changes in accounting policies are also expected to be reflected in the Company's unaudited condensed consolidated interim financial statements and consolidated financial statements in the subsequent periods for the remainder of the year ended June 30, 2020.

Effective July 1, 2019, the Company adopted IFRS 16 Leases, which specifies how to recognize, measure, present and disclose leases. The standard provides a single lessee accounting model, requiring lessees to recognize assets and liabilities for all major leases.

The Company's accounting policy under IFRS 16 Leases is as follows:

At inception of a contract, the Company assesses whether a contract is, or contains, a lease based on whether the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

The Company recognizes a right-of-use asset and a lease liability at the lease commencement date. The right-of-use asset is initially measured based on the initial amount of the lease liability adjusted for any lease payments made at or before the commencement date, less any lease incentives received. The assets are depreciated to the earlier of the end of the useful life of the right-of-use asset or the lease term using the straight-line method as this most closely reflects the expected pattern of consumption of the future economic benefits.

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

The lease term includes periods covered by an option to extend if the Company is reasonably certain to exercise that option. In addition, the right-of-use asset is periodically reduced by impairment losses, if any, and adjusted for certain re-measurements of the lease liability.

The lease liability is initially measured as the present value of future lease payments excluding payments made at the commencement date, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, the Company's incremental borrowing rate. Generally, the Company uses its incremental borrowing rate as the discount rate. The lease liability is measured at amortized cost using the effective interest method. It is re-measured when there is a change in future lease payments arising from a change in an index or rate, if there is a change in the Company's estimate of the amount expected to be payable under a residual value guarantee, or if the Company changes its assessment of whether it will exercise a purchase, extension or termination option.

When the lease liability is re-measured in this way, a corresponding adjustment is made to the carrying amount of the right-of-use asset or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero.

The Company has elected to apply the practical expedient not to recognize right-of-use assets and lease liabilities for short-term leases that have a lease term of 12 months or less and leases of low-value assets. The lease payments associated with these leases is recognized as an expense on a straight-line basis over the lease term.

On adoption of the new standard on July 1, 2019, the Company recognized right-of-use assets of \$568,840 and a lease liability of \$503,924. The impact of the adoption of this new standard is non-cash in nature and, as such, the Company does not anticipate a material impact on cash flows. Please refer to Note 13 in the Company's financial statements for more information.

The following table lists the Company's operating lease obligations recognized on initial application of IFRS 16 Leases at July 1, 2019.

Operating lease commitment disclosed as of June 30, 2019	\$1,064,120
Estimated variable lease payments not included in lease obligations	(\$392,570)
Prepaid portion of lease obligation	(\$64,916)
Discounted using the incremental borrowing rate at July 1, 2019	<u>(\$102,710)</u>
Lease obligations recognized as at July 1, 2019	<u>\$503,924</u>

When measuring lease liabilities for leases classified as operating leases, the Company discounted lease payments using its incremental borrowing rate at July 1, 2019 of 8%.

IFRIC 23 - Uncertainty over Income Tax Treatments

On June 7, 2017, the IASB issued IFRIC Interpretation 23 Uncertainty over Income Tax Treatments. The Interpretation provides guidance on the accounting for current and deferred tax liabilities and assets in circumstances in which there is uncertainty over income tax treatments. The Interpretation requires:

- an entity to contemplate whether uncertain tax treatments should be considered separately, or together as a group, based on which approach provides better predictions of the resolution;
- an entity to determine if it is probable that the tax authorities will accept the uncertain tax treatment; and
- if it is not probable the uncertain tax treatment will be accepted, measure the tax uncertainty based on the most likely amount of expected value, depending on whichever method better predicts the resolution of the uncertainty.

The Company adopted IFRIC Interpretation 23 in its financial statements for the fiscal year beginning on July 1, 2019. Based on an analysis of the Company's historic tax filing positions as of July 1, 2019, the Interpretation did not have an impact on the consolidated financial statements.

Financial Instruments and Risk Management

The company is exposed through its operations to the following financial risks:

- Market Risk
- Foreign currency risk
- Interest Rate Risk
- Credit Risk
- Liquidity Risk

In common with all other businesses, the Company is exposed to risks that arise from its use of financial instruments. This section of the MD&A describes the Company's objectives, policies and processes for managing those risks and the methods used to measure them. Further quantitative information in respect of these risks is presented throughout the financial statements.

There have been no substantive changes in the Company's exposure to financial instrument risks, its objectives, policies and processes for managing those risks or the methods used to measure them from previous years unless otherwise stated in this section of the MD&A.

General Objectives, Policies and Processes:

The Board of Directors has overall responsibility for the determination of the Company's risk management objectives and policies and, whilst retaining ultimate responsibility for them, it has delegated the authority for designing and operating processes that ensure the effective implementation of the objectives and policies to the Company's management. The effectiveness of the processes put in place and the appropriateness of the objectives and policies it sets are reviewed periodically by the Board of Directors if and when there are any changes or updates required.

The overall objective of the Board is to set policies that seek to reduce risk as far as possible without unduly affecting the Company's competitiveness and flexibility. Further details regarding these policies are set out below.

Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market prices are comprised of three types of risk: foreign currency risk, commodity price risk and equity price risk. The Company does not currently have significant commodity risk or equity price risk.

Foreign Currency Risk:

Foreign currency risk is the risk that the future cash flows or fair value of the Company's financial instruments that are denominated in a currency that is not the Company's functional currency will fluctuate due to changes in foreign exchange rates. Portions of the Company's cash and cash equivalents and accounts payable and accrued liabilities are denominated in US dollars. Accordingly, the Company is exposed to fluctuations in the US and Canadian dollar exchange rates.

As at September 30, 2019, the Company has a net excess of US dollar denominated cash and cash equivalents in excess of US dollar denominated accounts payable and accrued liabilities of US\$1,252,245 which is equivalent to CDN\$1,658,348 at the September 30, 2019 exchange rate. The US dollar financial assets generally result from holding US dollar cash to settle anticipated near-term accounts payable and accrued liabilities denominated in US dollars. The US dollar financial liabilities generally result from purchases of supplies and services from suppliers from outside of Canada.

Each change of 1% in the US dollar in relation to the Canadian dollar results in a gain or loss, with a corresponding effect on cash flows, of \$16,583 based on the September 30, 2019 net US dollar assets

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

(liabilities) position. During the period ended September 30, 2019, the Company recorded foreign exchange gain of \$21,036 (September 30, 2018 – loss of \$56,836).

Interest Rate Risk:

Interest rate risk is the risk that future cash flows will fluctuate as a result of changes in market interest rates. As at September 30, 2019, holdings of cash and cash equivalents of \$5,120,000 (June 30, 2019 - \$3,063,398) are subject to floating interest rates. In addition, the Company held fixed rate guaranteed investment certificates, cashable within ninety days of purchase, with a book value of \$9,253,258 (June 30, 2019 – \$9,512,120). The balance of the Company's cash holdings of \$335,705 (June 30, 2019 - \$298,443) are non-interest bearing.

As at September 30, 2019, the Company held short-term investments in the form of variable rate guaranteed investment certificates, with one year terms, with face value of \$57,500 (June 30, 2019 - \$57,500) and fixed rate guaranteed investment certificates, with terms of 6 to 12 months, with a face value of \$Nil (June 30, 2019 - \$5,000,000).

The Company's current policy is to invest excess cash in guaranteed investment certificates or interest bearing accounts of major Canadian chartered banks or credit unions with comparable credit ratings. The Company regularly monitors compliance to its cash management policy.

The Company, as at September 30, 2019, does not have any borrowings. Interest rate risk is limited to potential decreases on the interest rate offered on cash and cash equivalents and short-term investments held with chartered Canadian financial institutions. The Company considers this risk to be immaterial.

Credit Risk:

Credit risk is the risk of financial loss to the Company if a customer or a counter party to a financial instrument fails to meet its contractual obligations. Financial instruments which are potentially subject to credit risk for the Company consist primarily of cash and cash equivalents and short-term investments. Cash and cash equivalents and short-term investments are maintained with financial institutions of reputable credit and may be redeemed upon demand.

The carrying amount of financial assets represents the maximum credit exposure. Credit risk exposure is limited through maintaining cash and cash equivalents and short-term investments with high-credit quality financial institutions and management considers this risk to be minimal for all cash and cash equivalents and short-term investments assets based on changes that are reasonably possible at each reporting date.

Liquidity Risk:

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they become due. The Company's policy is to ensure that it will always have sufficient cash to allow it to meet its liabilities when they become due, under both normal and stressed conditions, without incurring unacceptable losses or risking damage to the Company's reputation. The key to success in managing liquidity is the degree of certainty in the cash flow projections. If future cash flows are fairly uncertain, the liquidity risk increases. As at September 30, 2019, the Company has cash and cash equivalents and short-term investments of \$14,766,888 (June 30, 2019 - \$18,039,054), current liabilities of \$1,462,073 (June 30, 2019 - \$1,562,865), and a working capital surplus of \$13,593,209 (June 30, 2019 - \$16,985,451).

Financial Instruments

The Company's cash and cash equivalents of \$14,708,963 (June 30, 2019 - \$12,873,961) are measured at amortized costs. The Company's short-term investments of \$57,925 (June 30, 2019 - \$5,165,093) are measured at amortized cost.

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

Capital Management

The Company considers all components of shareholders' equity as capital. The Company's objective is to maintain sufficient capital base in order to meet its short-term obligations while preserving flexibility to pursue future development and production of the business.

The Company is not exposed to any externally imposed capital requirements.

Outstanding Share Data

InMed's authorized capital is unlimited common shares without par value. As at November 6, 2019, the Company had the following securities issued and outstanding:

<u>Securities ⁽¹⁾</u>	
Common shares	172,283,633
Stock options	19,672,500
Share purchase warrants	16,611,244
Agents' warrants	1,106,397

⁽¹⁾ See the Company's unaudited condensed consolidated interim financial statements for the quarter ended September 30, 2019 for a detailed description of these securities.

Commitments

Pursuant to the terms of agreements with various contract research organizations, as at September 30, 2019, the Company is committed for contract research services and materials at a cost of approximately \$3,228,272. A total of \$3,076,245 of these expenditures are expected to occur in the twelve months following September 30, 2019 and the balance of \$152,027 in the following twelve month period.

Pursuant to the terms of a May 31, 2017 Technology Assignment Agreement between the Company and UBC, the Company is committed to pay royalties to UBC on certain licensing and royalty revenues received by the Company for biosynthesis of certain drug products that are covered by the agreement.

Pursuant to the terms of a December 13, 2018 Collaborative Research Agreement with UBC in which the Company owns all right, title and interest in and to any intellectual property, in addition to funding research at UBC, the Company is committed to make a one-time payment upon filing of any patent application arising from the research.

On January 14, 2019, the Company executed a lease for new office premises from September 1, 2019 to August 31, 2024 at an annual cost of approximately \$129,800, increasing up to \$143,300 in the last year of the lease, plus annual operating costs estimated at \$78,500. In January 2019, the Company paid the landlord a security deposit, of which approximately \$32,720 is included in "Prepays and advances" on the Company's September 30, 2019 balance sheet, that is to be applied to the operating costs for certain months during the five year lease term.

Short-term investments include guaranteed investment certificates with a face value of \$57,500 (June 30, 2019 - \$57,500) that are pledged as security for a corporate credit card.

The Company has entered into certain agreements in the ordinary course of operations that may include indemnification provisions, which are common in such agreements. In some cases, the maximum amount of potential future indemnification is unlimited; however, the Company currently holds commercial general liability insurance. This insurance limits the Company's liability and may enable the Company to recover a portion of any future amounts paid. Historically, the Company has not made any indemnification payments under such agreements and it believes that the fair value of these indemnification obligations is minimal. Accordingly, the Company has not recognized any liabilities relating to these obligations for any period presented.

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

From time to time, the Company may be subject to various legal proceedings and claims related to matters arising in the ordinary course of business. The Company does not believe it is currently subject to any material matters where there is at least a reasonable possibility that a material loss may be incurred.

Disclosure Controls and Procedures and Internal Controls Over Financial Reporting

For the three months ended September 30, 2019, a reversal of share-based payment expense due to the forfeiture of granted stock options that had not fully vested was not initially made resulting in the issuance of these amended and restated unaudited condensed consolidated interim financial statements. Management identified a significant weakness in the Company's disclosure controls and procedures and internal controls over financial reporting. In the course of preparing the original unaudited condensed consolidated interim financial statements for the three months ended September 30, 2019, management failed to fully complete its quarterly financial closing checklist which includes a step to review the forfeiture of granted stock options. As a consequence, the Company has implemented an additional disclosure and internal control procedure requiring evidence of both Chief Executive Officer and Chief Financial Officer sign off on a completed reporting checklist prior to finalizing any financial reporting. There were no additional changes to our disclosure controls or to our internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, such controls.

Amended and Restated Condensed Consolidated Interim Financial Statements

These unaudited condensed consolidated interim financial statements have been amended to correct for errors in the original interim financial statements. The amendment relates to the reversal of share-based payment transactions due to the forfeiture of granted stock options that had not fully vested. The impact of these changes is highlighted in the table below.

	As at September 30, 2019		
	As previously reported	Adjustment	As restated
Share-based payments	651,567	(500,000)	151,567
Total net and comprehensive loss	(3,886,815)	500,000	(3,386,815)
Contributed surplus	14,867,791	(500,000)	14,367,791
Accumulated deficit	(68,456,929)	500,000	(67,956,929)

Risks and Uncertainties

An investment in the Company involves significant risks and must be considered speculative due to the nature of the Company's business. Investors should carefully consider the risks and uncertainties described below. This list of risks and uncertainties below is not exhaustive. Furthermore, additional risks and uncertainties not presently known to InMed or that InMed believes to be immaterial may also adversely affect InMed's business. In addition to the risks identified elsewhere in this MD&A, investors should carefully consider all of the risk factors associated with the Company and its business, identified in the disclosure under the heading "Risk Factors" in the Company's Annual Information Form dated September 26, 2019 for the year ended June 30, 2019, a copy of which is available on SEDAR at <http://www.sedar.com>.

Risks Related to the Company's Business

The Company has a history of operating losses and may never achieve profitability in the future.

The Company is involved in research and development to identify and validate new therapies and drug targets that could become marketable. This process takes several years and requires significant financial resources without income. The Company expects these expenses to result in continuing operating losses in the foreseeable future.

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

The Company's ability to generate future revenue or achieve profitable operations is largely dependent on its ability to develop its drug targets, to attract the experienced management and know-how to develop new drug candidates and to partner with larger, more established companies in the industry to successfully commercialize its drug candidates. Successfully developing preclinical or clinical drug candidates into marketable drugs takes several years and significant financial resources and the Company cannot assure that it can achieve these objectives.

The Company will primarily be in a developing industry and will be subject to all associated regulatory risks.

The Company's business must be evaluated in light of the problems, delays, uncertainties and complications encountered in connection with establishing a cannabinoid-based pharmaceutical business. There is a possibility that none of the Company's drug candidates under development in the future will be found to be safe and effective, that it will be unable to receive necessary regulatory approvals in order to commercialize them, or that it will obtain regulatory approvals that are too narrow to be commercially viable. Any failure to successfully develop and obtain regulatory approval for products would have a material adverse effect on the Company's business, financial condition and results of operations.

Clinical trials for potential drug candidates will be expensive and time consuming, and their outcomes uncertain.

Before the Company can obtain regulatory approval for the commercial sale of any drug candidate or attract major pharmaceutical companies with which collaborate, it will be required to complete extensive clinical trials to demonstrate safety and efficacy. Clinical trials are expensive and are difficult to design and implement. The clinical trial process is also time-consuming and can often be subject to unexpected delays.

The timing and completion of clinical trials may be subject to significant delays relating to various causes, including but not limited to: inability to manufacture or obtain sufficient quantities of materials for use in clinical trials; licensing or import/export restrictions for cannabinoid-based pharmaceuticals; delays arising from collaborative partnerships; delays in obtaining regulatory approvals to commence a study, or government intervention to suspend or terminate a study; delays, suspensions or termination of clinical trials by the applicable institutional review board or independent ethics board responsible for overseeing the study to protect research subjects; delays in identifying and reaching agreement on acceptable terms with prospective clinical trial sites; slow rates of patient recruitment and enrollment; uncertain dosing issues; inability or unwillingness of medical investigators to follow clinical protocols; variability in the number and types of subjects available for each study and resulting difficulties in identifying and enrolling subjects who meet trial eligibility criteria; scheduling conflicts; difficulty in maintaining contact with subjects after treatment, resulting in incomplete data; unforeseen safety issues or side effects; lack of efficacy during clinical trials; reliance on clinical research organizations to conduct clinical trials, which may not conduct such trials with good laboratory practices; or other regulatory delays.

The results of preclinical studies or initial clinical trials are not necessarily predictive of future favorable results.

Preclinical tests and initial clinical trials are primarily designed to test safety and to understand the side effects of drug candidates and to explore efficacy at various doses and schedules. Success in preclinical or animal studies and early clinical trials does not ensure that later large-scale efficacy trials will be successful nor does it predict final results. Favorable results in early trials may not be repeated in later ones.

Protection of proprietary technology can be unpredictable and costly.

The Company's success will depend in part on its ability to obtain patents, defend patents, maintain trade secret protection and operate without infringing on the proprietary rights of others. Interpretation and

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

evaluation of pharmaceutical patent claims present complex and often novel legal and factual questions. Accordingly, there is some question as to the extent to which biopharmaceutical discoveries and related products and processes can be effectively protected by patents. As a result, there can be no assurance that:

- patent applications will result in the issuance of patents;
- additional proprietary products developed will be patentable;
- patents issued will provide adequate protection or any competitive advantages;
- patents issued will not be successfully challenged by third parties;
- the patents issued do not infringe the patents or intellectual property of others; or
- that the Company will be able to obtain any extensions of the patent term.

A number of pharmaceutical, biotechnology, medical device companies and research and academic institutions have developed technologies, filed patent applications or received patents on various technologies that may be related to the business of the Company. Some of these technologies, applications or patents may conflict with or adversely affect the technologies or intellectual property rights of the Company. Any conflicts with the intellectual property of others could limit the scope of the patents, if any, that the Company may be able to obtain or result in the denial of patent applications altogether. Further, there may be uncertainty as to whether the Company may be able to successfully defend any challenge to its patent portfolio.

In addition, any breach of confidentiality by a third party by premature disclosure may preclude the obtainment of appropriate patent protection, thereby affecting the development and commercial value of the Company's technology and products. The Company may also decide to acquire or in-license certain pending or issued patents but cannot guarantee their approval and/or commercial viability.

Competition

The planned business to be carried out by the Company will be highly competitive and involve a high degree of risk. There can be no assurance that the licensing or other arrangements respecting the patent-pending cannabinoid-based drug discovery platform and several cannabinoid-based drugs in different disease areas, or applications thereof, sought to be obtained can be secured on favorable terms or otherwise, nor are there any assurances that sales or license revenues, if obtained, will be in sufficient quantities to make the business profitable. In its efforts to achieve its objectives, the Company will compete with other companies that may have greater resources, many of which will not only develop technology but also manufacture and sell similar products on a worldwide basis.

Uninsured or Uninsurable Risk

The Company may become subject to risks against which it cannot insure or against which it may elect not to insure. Settling related liabilities would reduce funds available for core business activities. Settlement of uninsured liabilities could have a material adverse effect on our financial position.

Conflicts of Interest

The Company's directors and officers may currently be involved, or become involved, in other business ventures that compete with our platform and services. Business opportunities for the Company may create circumstances in which outside interests of our directors and officers conflict with the interests of the Company. Directors and officers are required to act in good faith and in a manner that benefits the Company.

It is possible, however, that our directors and officers may owe similar consideration to another organization(s). It is possible that these and other conflicts of interest are resolved in a way that has a material adverse impact on the Company.

InMed Pharmaceuticals Inc.
AMENDED AND RESTATED MANAGEMENT'S DISCUSSION AND ANALYSIS
Three months ended September 30, 2019

Dependence on Key Personnel

The Company depends on support from existing directors and officers and its ability to attract, and retain, new directors, officers and other personnel with appropriate skill sets. Inability to retain key team members or find new professionals to serve in important roles could have a material adverse effect on the Company's business. There can be no assurance that we will be able to attract or retain the quality of personnel required in the future.

Financial Liquidity

The Company is not currently generating any revenue and expects to operate at a loss as it conducts research and development on its drug candidates. Based on the funds available as at September 30, 2019, the Company estimates that it has cash resources to last until approximately into the fourth quarter of calendar 2020. We will require additional financing within this time frame in order to execute our business plan. Our ability to secure required financing will depend in part upon investor perception of our ability to create a successful business. Capital market conditions and other factors beyond our control may also play important roles in our ability to raise capital. The Company can offer no assurance that it will be able to successfully obtain additional financing, or that future financing occurs on terms satisfactory to our management and/or shareholders. If funds are unavailable in the future, or unavailable in the amounts that we feel the business requires, or unavailable on acceptable terms, we may be required to cease operating or modify our business plans in a manner that undermines our ability to achieve our business objectives.

Financial Statements Prepared on Going Concern Basis

The Company's financial statements have been prepared on a 'going concern' basis under which an entity is considered to be able to realize its assets and satisfy its liabilities in the ordinary course of business. The Company's future operations are dependent upon the successful completion of financing and the continued advancement of its drug candidates. The Company cannot guarantee that it will be successful in obtaining financing in the future or in achieving business objective set forth internally or externally. Our consolidated financial statements may not contain the adjustments relating to carrying values and classification of assets and/or liabilities that would be necessary should the Company be unable to continue as a going concern.

Costs of Maintaining a Public Listing

As a result of being a publicly listed company, the Company will incur greater legal, accounting and other expenses related to regulatory compliance than it would have had it remained a private entity. The Company may also elect to devote greater resources than it otherwise would have on communication and other investor relations activities typically considered important by publicly traded companies.

Share Price Volatility and Speculative Nature of Share Ownership

The Company's common shares are listed for trading on the TSX, resulting in shareholders being able to freely trade their shares. Factors both internal and external to the Company may significantly influence the price at which our shares trade, and the volatility of our share price. Quarterly operating results and material developments reported by the Company can, and likely will, influence the price of our shares.

Sentiment toward biotechnology and/or cannabis-related stocks, as well as toward the stock market in general, is among the many external factors that may have a significant impact on the price of our shares. The Company's business is at an early stage of development and is not generating any revenue and the Company does not possess large cash reserves. As such, it should be considered a speculative investment. There is no guarantee that a liquid market will be developed for the Company's shares.
